# USER GUIDE FOR HISTORICAL TRAFFIC COUNTS 2010 - 2013

## "CLICK THE BOOKMARKS TAB ON THE LEFT"

1. Click on the (ROAD NAME INDEX) reading from left to right select the **NAME OF LEG** (The Name of Leg column is listed in numeric/alphabetical order). Next select a **LOCATION** (cross road). Then select the REF #/s for your choices. (write them down for reference)

2. Click on (COUNTS BY REFERENCE NUMBER) ***"SCROLL DOWN"*** the pages until you locate your pre-selected (REF #/s). Reference numbers are grouped together representing intersections.

# HISTORICAL TRAFFIC COUNTS

SNOHOMISH COUNTY
PUBLIC WORKS

Steve Thomsen, P.E., Public Works Director
Jim Bloodgood, P.E., Traffic Engineer

# INTRODUCTION

Snohomish County Department of Public Works is responsible for the administration of a transportation system consisting of approximately 1570 miles of roads that requires large expenditures annually for planning, design, construction, and maintenance. This necessitates having reliable and current traffic volume data, vehicle type classification, and travel statistics throughout the county. In 2013, the Traffic Operations Section of the Department of Public Works laid out and processed approximately 1251 electronic machine counts and counted and processed 267 turning movement counts in Snohomish County. Such records are essential for accurate estimates of present and future road use, needs, and costs.

Vehicular traffic counts have been obtained at selected locations on the county road system for many years. The majority of the volumes shown in this report are computed from short-term counts and their degree of accuracy is acceptable for showing yearly trends. Traffic data to be used for design purposes should be obtained by specific request.

A number has been assigned to each intersection for quick and easy reference. Also, the road log number and milepost have been added to specifically identify the file in which other pertinent information is filed.

## COLLECTION AND PROCESSING OF DATA

A traffic count is the number of vehicles that pass a given point during a specific period of time. Traffic volumes include vehicles traveling in both directions. Either manual tally or a mechanical count apparatus records vehicles. A manual tally, intersection or turning movement count records the number and direction of vehicles entering and leaving an intersection during the PM peak hour. This number is multiplied by 10 for an estimated 24-hour volume. The electronic count apparatus or machine traffic counter determines the total volume by recording the number of electronic pulses in a 24-hour period. A pulse is recorded each time an axle passes over a hose. The total number of axle hits is divided by 2. These factors may account for discrepancies between the manual and machine volumes.

For additional information concerning Traffic Count Data, please contact Traffic Operations at (425) 388-6420.
