

**Snohomish County
CY 2021 Annual Report
Attachment for Question 51a
Field Screening Techniques used to Determine % of MS4 Screened**

Question Number 51a *“Cite field screening techniques used to determine percent of MS4 screened.”*

For the known MS4, percent of MS4 screened will be determined by:

$$\frac{\text{\# of circuits screened}}{\text{Total \# of circuits}}$$

A circuit is an outfall and all the pipes, catch basins and other infrastructure that discharges to the outfall. In the Snohomish County has an inventory of 1639 drainage circuits in our Cartegraph asset management system.
