

Snohomish County District Court – New Courtroom Technology

Snohomish County District Court has employed new technology for presentation of media in the courtroom. This new technology is called WiDi and employs a device, WPG-370, which is a wireless presentation gateway. It can be used to display content contained on your laptop, tablet, or smart phone. The technology will be piloted at South Division and hopefully will be available at the other District Court Divisions in the near future.

There are four modes of connecting to the WiDi technology;

- 1) WiFi Presentation Mode,
- 2) WiDi Presentation Mode,
- 3) Media Streaming, and
- 4) Screen Mirroring.

Not all modes are compatible with every device; however, your device should be able to connect via at least one mode. This allows many different devices to be used on one platform and should be easily accessible for counsel.

If you wish to use the WiDi Technology, there are some system requirements for your device that you will be responsible for installing prior to your hearing date. The technology required is *free* and is outlined below based on the type of device you will be using to connect to the WiDi. Additionally, counsel who avail themselves of this technology to display media or data must bring a hard copy (e.g. printed version, CD, DVD, etc.) to be marked as evidence for the court file. Finally, it is important to note that at this point in time, the device will block access to the internet so any media or data you wish to display must be on your device.

Requirements for use of WiDi Technology:

Laptops:

- 1) Must have Windows 7 or 8
- 2) WiFi Presentation Mode
 - a. You must download the WPG-370 Client Software located at:
 - b. http://www.viewsonic.com/assets/downloads/wpg-370/WPG-370_CD_Software.zip
- 3) WiDi Presentation Mode
 - a. You must download the Intel Wireless Display software at:
http://www.intel.com/p/en_US/support/detect/wireless-display
- 4) Media Streaming Mode
 - a. An App must be downloaded from the App Store for either Android or Apple
 - b. Android Device App:
 - i. AirFun - <http://airfun.soft112.com/>
 - c. Apple Device App:
 - i. AirFun - <https://itunes.apple.com/us/app/airfun/id658769404?mt=8>

Smartphones and Tablets/iPads:

- 1) Screen Mirroring Mode
 - a. Must be **Miracast** certified
 - b. Must be Android 4.2 OS or later
- 2) Media Streaming Mode
 - a. An App must be downloaded from the App Store for either Android or Apple
 - b. Android Device App:
 - i. AirFun -
 - c. Apple Device App:
 - i. AirFun
