In an effort to improve safety on rural arterials, Snohomish County will be installing an innovative technology to enhance road surface traction. High friction surface treatments (HFST) are a thin layer of specially engineered, high friction aggregates that produce long lasting skid resistance. This treatment will be applied to a section of road near your property this summer.

Construction Schedule:
- Construction on the HFST application will occur in your area sometime between June 2017 and October 2017

Impact on the Surrounding Area:
- Single-lane closures may occur during construction
- If access to your driveway will be affected, Snohomish County will notify you in advance of applying the HFST Treatment with a date and time estimate
- The treatment application may cause a noticeable odor in the air for a day or two after application
