

We want you to know . . .

During 2012 Jim Creek Bridge #42 on Jordan Road will be replaced.

The bridge is approximately three miles east of downtown Arlington in the vicinity of Snohomish County's River Meadows Park.

The concrete arch bridge was built as a two-lane structure in 1914 when vehicles were narrower. Today traffic is limited to a stop sign controlled single lane, which makes the bridge functionally obsolete. Sight distances are also inadequate for the posted speed limit.

These shortcomings will be eliminated with the construction of a new, two-lane bridge and realignment of the road to correct the sight distance problems. Single-lane access will be maintained throughout most of the construction in 2012.

During 2011, you are likely to see county surveyors and other staff members doing field work in preparation for construction in 2012.
