Subject: Point Wells Development Comments

Mr. Darryl Eastin,

I live in Richmond Beach/Innis Arden/West Shoreline and am disappointed and frustrated to learn of the proposed Point Wells Development.

The proposed scale and scope of the development would adversely affect the quality of life in this neighborhood, and the city of Shoreline.

It would especially affect the traffic in my street and those in Richmond Beach, since there is only one road into Point Wells.

- Why should Shoreline take all the traffic impact and none of the benefits when the development is in Woodway? Why is there almost no talk of having a road go through Woodway?

The amount of traffic proposed is staggering.

The quality of life would suffer with noise, light and traffic pollution.

- When I walk in my neighborhood I will look over and see tall buildings, and hear traffic. There will also be much marine activity and there will be noise from power boats and jet skis as well.

The city of Shoreline and my area will be severely affected, and yet we are powerless to act or have much input on the development since it is in Woodway.

- I don't think this is fair and am hoping Snohomish County and State and Federal agencies will do what they can to protect me and my neighborhood and make this development as small and fitting in style and scope to the current feel of Richmond Beach and West Shoreline.

These comments are about the EIS, in that this is my environment, where I live.

Thank you,

Julian Catford
