Subject: Point Wells comments

- 1) In light of the recent slide at Oso and the revelation of the documented slide areas along Puget Sound, will new testing be done on the slope above Point Wells? Current data that is being used may no longer be considered accurate.
- 2) In addition to the above we are being continuously warned about earth quakes and possible tsunamis in Puget Sound what is being provided as an emergency escape route should access through Richmond Beach be lost?
- 3) Fremont Ave. N. parallels Aurora and is heavily used by current Richmond Beach residents to access the freeway via 175th to the south and by 205th to the north. There are times during commute hours that the roadway is almost filled between those two streets. There are also two schools along that same stretch that add to the congestion. What is being considered to mitigate the increased traffic on this residential street?

Thanks for the work you are doing on this.
