**Comments:**

The projected impact of the Point Wells development on the NW portion of Shoreline is tremendous. While I agree that some businesses may benefit, as well the developer, the local neighbors will feel the negatives of increased noise and traffic during construction. The differences between Alternative 1 and 2 are minimal. Perhaps an alternative 2-4 could be considered where the residential units are reduced to 1,000 and the office and retail uses reduced accordingly. It would suggest that parks and open space availability to the public be increased. I do believe, however, that in these days of climate change, damaged shoreline, upscaling fragile Puget Sound our continued and increased dependence on fossil fuels we know better than to take any action.

Input to the scope of the EIS can be given verbally at the public scoping meeting or in writing at any time during the comment period, which ends on March 3, 2014. Written comments can be sent to:
