

June 2011 Update: Bridge #540

Snohomish County Public Works continues to monitor the condition of S. Fork Sauk River Bridge #540 that leads to Reece's Hideout, and is gathering the necessary data in preparation for design and replacement of the bridge.

Engineers have considered several types and sizes of bridges for the location. The topographical survey is completed. Mapping the boundaries of wetlands and surveying the contours of the river will follow in July when the level of the river is down. Hydraulic modeling and other tasks are also scheduled between now and the fall.

Later in the fall we would like to meet with you and other property owners to discuss the project and the options being considered for replacement of the bridge. By then we will have more information to share with you.

We would like to let you know about the meeting via phone or e-mail if possible.

Please contact Tina Hokanson, Public Works Communications: (425) 388-3789 or tina.hokanson@snoco.org and let her know how best to contact you. Thank you
