

Dashboard Quick User Guide

The Dashboard is an interactive application. The information presented may change as you click on certain items or apply the filters that are available.

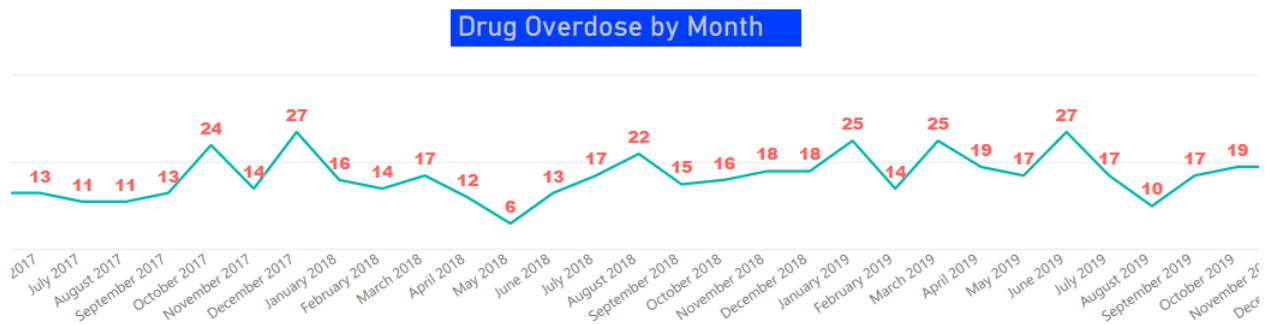

Current Year Totals: The top section presents the current year totals to date for specific counts. This section will not change as you apply filters.

2020 Drug Overdose Deaths Total	2020 Drug Overdose Deaths Involving Opioids	2020 Drug Overdose Deaths Involving Fentanyl	2020 Drug Overdose Deaths Involving Methamphetamine
21	7	4	6

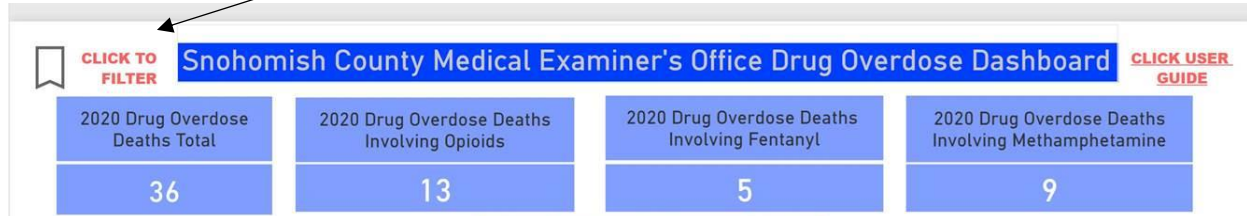

Drug Overdose by Manner of Death: This section displays drug overdose counts by manner of death. You can highlight one specific year by clicking that year's pie chart. Please note these numbers will be affected if you apply filters.

Drug Overdose by Month: The bottom of the dashboard shows counts by month for the most current 4-year span. This line chart will be affected if you apply filters.

Filters: Filters are available on the upper left-hand side of the dashboard. If applied, the total counts will change, except for the Current Year Totals at the top. Those are static and will not change.

Once you click on the filter, it will open up the options shown below. If you want to hide the filters, click on "click to hide filters."

The following filters can be applied:

- Year of the Overdose – the most recent four years of data are available to select.
- Primary Drug Class – this filter contains two categories for Non-Opioid related Drug Overdose Deaths and Opioid related Drug-Overdose Deaths.
 - Applying the Non-Opioid filter will exclude any opioid related deaths. It will include deaths related to alcohol, benzodiazepines, cocaine, MDMA, Methamphetamine and Synthetic Cannabinoids.
 - Applying the Opioid related filter will limit the results to cases where opioids such as fentanyl and heroin were included in the Cause of Death.
- Secondary Drug Class – this filter contains many categories for specific types of drugs. Applying this filter will limit the results by what is selected. For example, if alcohol is selected, only cases where alcohol was included in the Cause of Death will be displayed. Please note you can select multiple categories.
 - The specific secondary drug class filters available include:
 - Alcohol
 - Benzo (benzodiazepines)
 - Cocaine
 - Fentanyl
 - Heroin
 - MDMA (a.k.a. Molly or Ecstasy)
 - Meth (methamphetamine)
 - Others (can include methadone, oxycodone, hydrocodone, morphine, hydromorphone, and buprenorphine)
 - Synthetic Cannabinoids
 - **Consideration: for many of these cases, multiple drugs were included in the cause of death. Selecting fentanyl as a filter for example, does not mean it was the only drug listed in the cause of death.**
- Age Category – there are 8 age categories to select from. Please note you can select multiple categories and applying this filter will change the counts by Manner of Death and by Month.
